

Analytics Refresh

General

The analytics Github repository is called [legis1_analytics](#). Within are a folder for each analytic. A unified refresh script will refresh data across these folders.

Lawmaker Tweets

- legis1_analytics/lawmaker_tweets
- File structure:
 - index.html
 - styles.css
 - [data-loader.js](#)
 - [csv-to-json-converter.py](#)
 - 1_tweets_df.csv [only exists locally]
 - data
 - default-view.json
 - index.json
 - lawmakers.json
 - [json files for each month; e.g. [tweets-2021-11.json.gz](#)]
- Refresh procedure:
 - Run the following SQL script and export to replace 1_tweets_df.csv:

```
select distinct a.pub_date date, DateName(month,
DateAdd(month,month(pub_date),-1)) month, year(pub_date) year, b.Chamber
chamber,
d.issue_name, b.display_name, b.person_id, b.party_name, b.party_id
party, b.us_state_id state, b.district_no district, e.full_name
,a.comm_content_id from congress_db.dbo.comm_content a
join legis.dbo.swi_issue_comm_mapping c
on a.comm_content_id = c.comm_content_id
join legis.rpt.lawmakers_list b
on a.member_id = b.member_id
join legis.dbo.swi_issue d
on c.swi_issue_id = d.swi_issue_id
join legis.dbo.person_alias e
on b.person_id = e.person_id
where a.pub_date > '2021-01-03' and c.swi_issue_id <= 21 and
e.is_preferred = 1
```

- Execute the conversion script:
 - `python csv-to-json-converter.py`
- Push to git, while keeping 1_tweets_df.csv local
 - `git add .`
 - `git reset -- 1_tweets_df.csv`
 - `git commit -m 'refreshing lawmaker tweets'`
 - `git push`

Congressional Tweet Sentiment

- legis1_analytics/congressional-tweet-sentiment
- File structure:
 - [serve.py](#)
 - [README.md](#)
 - index.html
 - debug.html
 - data
 - metadata.json
 - sample.parquet
 - [parquet files for months] *tweets_2023_Q1_m1.parquet*
 - scripts
 - old.csv [only keep locally]
 - Prepare_data.py
- Refresh procedure
 - Run the following SQL script and export to replace old.csv

```
select distinct a.comm_content_id, a.pub_date, b.Chamber chamber,
a.content, b.person_id, b.title, b.first_name, b.last_name,
b.display_name, b.party_name,
b.us_state_id, d.issue_name, a.sentiment_score score
from congress_db.dbo.comm_content a
join legis.dbo.swi_issue_comm_mapping c
on a.comm_content_id = c.comm_content_id
join legis.rpt.lawmakers_list b
on a.member_id = b.member_id
join legis.dbo.swi_issue d
on c.swi_issue_id = d.swi_issue_id
where a.pub_date > '2021-01-03' and c.swi_issue_id <= 21 and
a.comm_type_id = 1
```
 - Navigate to the scripts folder and execute the conversion script:
 - `python prepare_data.py`

- Navigate back to congressional-tweet-sentiment, push to git, while keeping old.csv local
 - `git add .`
 - `git reset -- scripts/old_1.csv`
 - `git reset -- scripts/old.csv`
 - `git commit -m 'refreshing sentiment'`
 - `git push`
